

# Warm Up

1. Two particles with the same charge will repel or drive away from each other. (*True/False*)
2. Materials that allow electricity to flow through them easily such as copper are called (*insulators/conductors*)
3. These materials conduct electricity under certain circumstances (*conductors/semiconductors*)
4. This is the study of charges, or charged objects that do not involve moving charges or current.  
(*electrostatics/electrodynamics*)
5. This the study of charges in motion.  
(*electrostatics/electrodynamics*)
